

Self-Introduction

Good morning and thank you for this opportunity.

My name is Khushali Wagh, and I completed my master's in computer applications (MCA) from P.R. Pote Patil College of Engineering and Management, Amravati and I also hold a bachelor's degree in mathematics.

On the technical side, I specialize in web development. My strongest skills are in PHP, MySQL, and I am also comfortable working with Python, Java, and C++.

I've had the chance to test these skills in the real world through a few internships. I worked as a Full Stack Development Intern at Royals Webtech, Nagpur and I also completed virtual internships focused on Data Engineering with AWS.

To give you an example of my work, I built a secure matrimonial platform called Shubh Jiwan using React and PHP, as well as a fully responsive e-commerce store for organic honey called Mieleza. Both projects included custom admin panels to manage data and backend settings.

I love solving problems, working with teams, and building clean web applications.
